

## Questions on Understanding Cataract Surgery

The following questions cover important information contained in the video presentation. Please circle the answer you feel most correct. If you need more time to answer a question than the video presentation provides, skip that question and return to it when the program is over. Once you have completed the questions, compare your answers to those found after the quiz.

1. **TRUE** or **FALSE**: It may take months to a year for your eyes to reach their full focusing potential.
2. **TRUE** or **FALSE**: You may notice glare and halos around lights, especially at night, and these visual side effects may not go away completely.
3. **TRUE** or **FALSE**: If you choose a Premium IOL, you will be responsible for the additional costs.
4. **TRUE** or **FALSE**: You may need to wear glasses from time to time after surgery, especially at night or in low light levels.
5. **TRUE** or **FALSE**: It is not important to keep your follow-up appointments after surgery.
6. **TRUE** or **FALSE**: Your doctor cannot guarantee that you will have the results you desire after surgery.
7. **TRUE** or **FALSE**: Monofocal IOLs provide a full range of vision from near to distant.
8. **TRUE** or **FALSE**: If you have astigmatism, it may require correcting with Limbal Relaxing Incisions during the procedure or laser vision correction after the procedure.
9. **TRUE** or **FALSE**: It is possible that during the procedure it may become necessary to implant a different type of IOL, other than the one planned.
10. **TRUE** or **FALSE**: This video contained a list of ALL potential risks, complications, and side effects that could possibly occur.

### Answers

1. **TRUE**: It could take months to a year for your eyes to reach their full focusing potential.
2. **TRUE**: You may notice glare and halos around lights that may not go away completely.
3. **TRUE**: You are responsible for the additional costs of a Premium IOL.
4. **TRUE**: You may need to wear glasses from time to time after surgery, especially at night or in low light levels.
5. **FALSE**: It is very important that you keep your follow-up appointments after surgery.
6. **TRUE**: Your doctor cannot guarantee that you will have the results you desire after the procedure.
7. **FALSE**: Monofocal IOLs provide clear vision at one point of focus, usually distance (at the patient's request).
8. **TRUE**: Astigmatism can be corrected by some types of IOLs, but Limbal Relaxing Incisions or laser vision correction are often used to correct astigmatism with many types of IOLs.
9. **TRUE**: It is possible that during the procedure it may become necessary to implant a different type of IOL, other than the one planned.
10. **FALSE**: This video does not contain a list of ALL potential risks, complications, and effects that could possibly occur.
